

# Trip - Excel Design Assignment

---

## Note

For this assignment, you should not to ask others for help (except your instructor). This is important because you need to go through the creative process of thinking through the layout and organization of the project.

## Instructions

You are considering taking a trip in the near future. You have three places you are considering--Galveston, San Antonio, and Padre Island. You are to make a budget which compares the costs of the three destinations. The hotel costs are: Galveston \$134 per day, San Antonio \$160 per day, and Padre Island \$200 per day. You estimate total gas for each of the trips would be as follows: Galveston \$80, San Antonio \$120 and Padre Island \$170. Meals and entertainment will be: Galveston \$40 per day, San Antonio \$55 per day and Padre Island \$60 per day. The spreadsheet should calculate the total trip cost for each destination. You are undecided how many days you'd be able to stay so design your spreadsheet so that you can enter the number of days you plan to stay into one single cell in your spreadsheet. If you change the number of days, the spreadsheet totals should change. Name your spreadsheet **yourname-Trip**

## Submitting your Assignment.

In Blackboard, submit **yourname-Trip**
